

Imvax Hosts Students on Virtual Field Trip

The students of Hardy Williams Mastery Charter School recently “went” on a field trip to Imvax. Laboratory Lead, Amelia Zellander, Ph.D., and other Imvax team members virtually guided students through a tour of the company’s lab and showcased machines such as the Luminex and the MaxQuant 16. Imvax team members explained both the use and importance of each machine, breaking down complex concepts into digestible information for the students.

After the tour, the field trip transitioned into a panel discussion where several key leaders, such as John Furey, CEO, Dr. David Andrews, CMO, Dr. Mark Exley, CSO, and more, answered questions on topics ranging from the greatest challenges of working at Imvax, to the ways in which COVID-19 has affected the industry, to what excites them most about their work and how they chose this career path.

“The journey of a career for me has been one of not a clearly defined pathway, but when I see opportunities to do something unique, different and exciting, just following that opportunity,” Furey said.

One of the biggest takeaways — there’s discovery and innovation in everything that Imvax does. The Imvax team is proud of the work they do and was honored at the opportunity to share it with the students of Hardy Williams Mastery Charter School.
